

## B. IO - End Markers

time limit per test: 1 second

memory limit per test: 256 megabytes

Today we are going to add up a bunch of numbers and then subtract a bunch of numbers from it. All you have to do is read them all in!

### Input

Each test case starts with a line containing two numbers  $0 \leq T_a \leq 100$  and  $0 \leq T_s \leq 100$ , the number of items to add and the number of items to subtract, respectively. This is followed by  $T_a + T_s$  numbers  $a_1, \dots, a_{T_a}, b_1, \dots, b_{T_s}$ . Each number will be on its own line, and range from -1000 to 1000. The tests are done when you read a zero for both  $T_a$  and  $T_s$ .

### Output

For each test case, output the sum  $\sum_i^{T_a} a_i - \sum_i^{T_s} b_i$ .
